

Hands-on Activity 14.1 Build a Narrative on a Storyboard	
Course Code: CPE 311	Program: BS CPE
Course Title: Computational Thinking with Python	Date Submitted: 04/16/2026
Section: CPE22S3	Date Performed: 04/16/2026
Members: Bautista, Mariela Caccam, Neil Alexander	Instructor: Engr. Neal Barton James Matira
Supplementary • Map out your datasets to your described objective. • Link and cite all your data. • What do you aim to prove with your dataset and visualization? • What is the narrative you want to write based on your data?	
Problem: - The Philippines has long relied on tourism as a vital pillar of its economy, generating millions of jobs and billions of dollars in revenue each year. Throughout the 2010s, the country's tourism sector experienced consistent and impressive growth, driven by the success of national campaigns like "It's More Fun in the Philippines" and significant investments in tourism infrastructure across the country. This decade of sustained growth reflected the Philippines' rising appeal as a destination in Southeast Asia and positioned tourism as one of the economy's most promising sectors. Statement: - This project seeks to analyze and visualize the impact of the COVID-19 pandemic on international tourist arrivals in the Philippines using historical data spanning from 2008 to 2023. Specifically, it aims to examine the sharp decline in arrivals during the pandemic years of 2020 and 2021, assess the pace and extent of recovery from 2022 onwards, and compare the current state of Philippine tourism against its pre-pandemic peak. Through clear and accessible data visualizations, this exploration intends to provide the general public with a comprehensive, evidence-based picture of how deeply COVID-19 disrupted one of the Philippines' most important economic sectors and how far the industry still has to go before it can be considered fully recovered. Find Data: • Visitors Arrival Annually ○ Source: ODPH - View Public Dataset ○ Source: Philippines Visitor Arrivals [Chart-Data-Forecast], 1988 - 2026 CEIC Data • Tourism Economic Impact 2000 to 2024 ○ Source: Philippine Tourism Satellite Account Philippine Statistics Authority

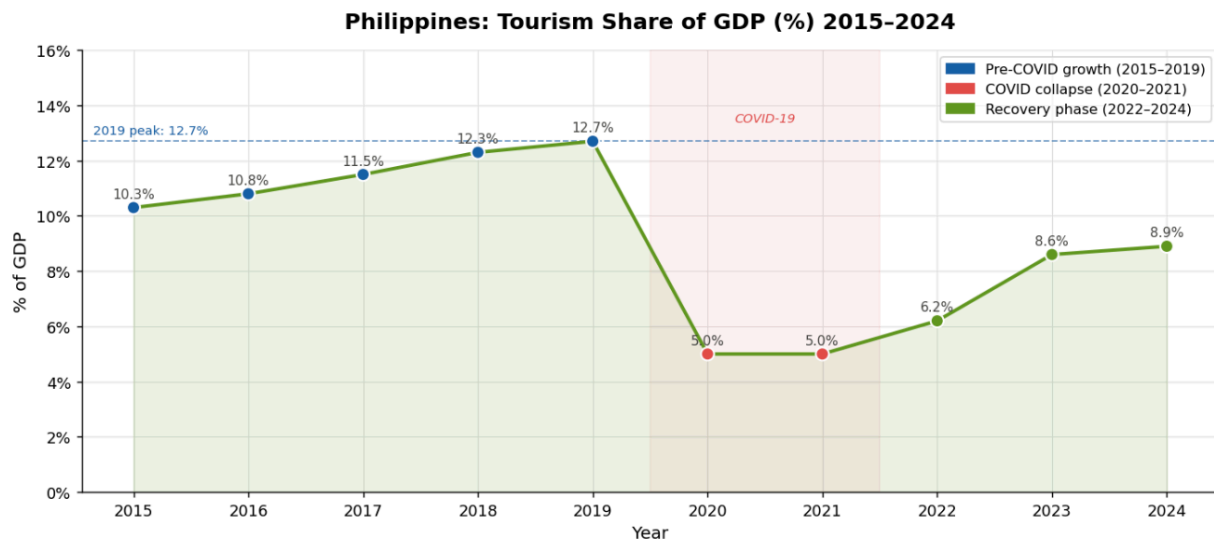

Chart 3 — Tourism Share of GDP (Line + Area Chart)

What do you aim to prove with your dataset and visualization?

- Our objective aims to show how international tourist arrivals in the Philippines were affected by the COVID-19 pandemic. Using historical data, the visualization will prove that tourism experienced steady growth before 2020, followed by a sharp and significant decline during the pandemic years of 2020 and 2021. It also aims to show the gradual recovery of tourism starting in 2022, and compare current arrival numbers with pre-pandemic peak levels to determine if full recovery has been achieved or not.

What is the narrative you want to write based on your data?

- The narrative of this data tells the story of the rise, disruption, and recovery of Philippine tourism. Before the pandemic, the country experienced continuous growth in international arrivals due to strong tourism campaigns and infrastructure improvements. However, COVID-19 caused an abrupt collapse in tourist arrivals, highlighting how dependent the economy is on global travel. After restrictions were lifted, the data shows a slow but steady recovery, showing the resilience of the tourism industry.

Individual Conclusion:

Bautista, Mariela

- This activity highlights that tourism is more than just a collection of travel statistics; it is a vital economic pillar whose stability was fundamentally shaken. By analyzing official records from **Open Data Philippines (ODPH)** and the **PSA**, we found that the 2019 peak of 8.26 million arrivals served as a baseline that the country is still fighting to regain. The process of mapping this data revealed that while the industry is resilient, the gap between current numbers and pre-pandemic levels represents a significant loss in national revenue and local livelihoods. This activity proved that computational thinking is essential for verifying these trends, allowing us to move past raw numbers to understand the true scale of the recovery still required for the sector.

Caccam, Neil Alexander

- The problem focuses on how COVID-19 affected the growth of Philippine tourism. Based on the dataset, international tourist arrivals dropped sharply during the pandemic years, showing a major disruption in a sector that was previously growing steadily. Although there is a gradual recovery after 2021, the numbers have not yet fully returned to pre-pandemic levels, indicating that the tourism industry is still rebuilding and recovering from the impact of the pandemic.
